Fixed VPN IPs

The section allows you to bind a specific IP address for a specific user for VPN connections.

> If you create a fixed binding for any user, then only one active VPN session will be possible for this user.

For example, you have a host on a local network that only users with certain IP addresses can connect to. To provide direct VPN access to this host, go to **Users -> VPN connections -> Fixed VPN IP addresses**, click **Add**, fill in the **User** and **IP address** fields, and click **Apply**.
