

Syslog

Enabling this module makes it possible to transfer all SafeUTM system messages (Syslog) to third-party collectors (Syslog Collector) or to SIEM systems.

Forwarding System Messages

Any private (local) or public (external) IP address can be specified as a collector.

In the **Port** field specify any port from the range 1 to 65535.

System logs will be sent to the specified remote server.

IP address

172.16.100.30

Port

2223

Save

System messages are transmitted according to RFC-5424 (UDP transport).
