

Connecting users

Connecting remote users via L2TP/IPsec protocol.

The settings for connecting users (client-to-site VPN) are described in the article [**VPN connection L2TP IPsec**](#).

Allow remote users to connect via L2TP/IPsec protocol

1. Go to **Users -> VPN connections**.
2. Check the item **L2TP/IPsec connection**. Unchecking the box disables all users connected via L2TP/IPsec and makes their connection impossible.

Save

3. Change the default PSK. The pre-shared key is a line that will need to be entered in the L2TP/IPsec connection settings on end devices.

When changing the Pre-shared key, all remotely connected users will be disconnected. To restore connectivity, specify a new PSK on remote user devices.
