

How to Restore to Previous Version after Updating SafeUTM

We recommend using this feature if SafeUTM does not work correctly after an update.

It is possible to restore to the previous version after updating SafeUTM from version 13.0.

When updating UTM to version 13.0 and higher, all the information of the version you are updating from will be saved on the UTM disk. To restore, follow these steps:

1. Go to SafeUTM local menu.
2. Enter the administrator's username and password.
3. Enter **15** and press **Enter**:

```
Server management
1. Shell
2. Configuring a local network interface
3. Disable access to the web interface from WAN
4. Disable access to the server via SSH from WAN
5. Disable access to the server via SSH from LAN
6. Enable 'Allow Internet Access to All'
7. Flush IP bans
8. Enable user's firewall
9. Create new backup
10. Restore backup
11. Enable Remote Assistant
12. Technical support contacts
13. Edit server name
14. Create cluster
15. Rollback to the previous version
16. Reboot
17. Shutdown
18. Exit

Type your choice and press Enter.
# 15
```

A window will appear with a warning and a description of the version to which it will restore.

4. Confirm your choice by typing **y** and pressing **Enter**.
5. After rebooting, SafeUTM will restore to the previous version.

The previous version will be restored with the settings and logs that were in SafeUTM at the time of the update.

When restoring the previous version, settings and logs from the updated version are not transferred to the previous version.
