

Android DNS Setup

1. Navigate to the SafeDNS **Dashboard > Settings** and copy your IP address in the "**Enter an IP address or DynDNS**" box. Click "**Add**".

The screenshot shows the SafeDNS Dashboard with the 'Settings' tab selected. The left sidebar contains a menu with 'Main', 'User administration', 'Settings', 'Devices', 'Policy', 'Schedule', and 'Advanced'. 'Settings' is marked with a red arrow and the number '1'. 'Devices' is marked with a red arrow and the number '2'. The main content area has tabs for 'Devices', 'Policy', 'Schedule', and 'Advanced'. The 'Devices' tab is active, showing a 'Video instruction for setting up' button and a section for 'Your IP address' with a red box and a red arrow pointing to it, labeled 'Copy ip address'. Below this, there are fields for 'IPv4 DNS-servers addresses' (195.46.39.39, 195.46.39.40), 'IPv6 DNS-servers addresses' (2001:67c:2778::3939, 2001:67c:2778::3940), and 'DoH address' (https://doh.safedns.com). A section titled 'IP addresses/DynDNS 0/13' contains a form to 'Add IP address or DynDNS' with a text input field labeled 'Enter an IP-address or DynDNS' (with a red arrow and 'Past ip address'), a dropdown menu labeled 'Default' (with a red arrow and 'Select filtering policy'), a 'Comment' field, and 'Add' and 'Edit as List' buttons. Below the form is a search bar and a table with columns 'IP address/DynDNS', 'Policy', and 'Comment'. The table currently shows 'List is empty'.

Please note, that the Android user interface varies depending on the device model.

2. Open the "Settings" app and navigate to the Wi-Fi menu.

Settings

-  System apps updater >
-  Security status >
-  SIM cards & mobile networks >
-  **Wi-Fi** Flat >
-  Bluetooth Off >
-  Portable hotspot Off >
-  VPN >
-  More >

3. Press on arrow icon of your current Wi-Fi connection.

4. In the Network Details press on the "IP settings - DHCP".
