

# Android DNS Setup

1. Navigate to the SafeDNS **Dashboard > Settings** and copy your IP address in the "**Enter an IP address or DynDNS**" box. Click "**Add**".

The screenshot shows the SafeDNS Dashboard with the 'Settings' tab selected. The left sidebar contains a menu with 'Settings' (annotated with a red arrow and '1') and 'Devices' (annotated with a red arrow and '2'). The main content area has tabs for 'Devices', 'Policy', 'Schedule', and 'Advanced'. The 'Devices' tab is active, showing a 'Your IP address' field (annotated with a red arrow and 'Copy ip address') and a 'DoH address' field. Below this, there is a section for 'IP addresses/DynDNS' with a table showing 'IPv4 DNS-servers addresses' (195.46.39.39, 195.46.39.40) and 'IPv6 DNS-servers addresses' (2001:67c:2778::3939, 2001:67c:2778::3940). A 'Video instruction for setting up' link is also present. At the bottom, there is a form to 'Add IP address or DynDNS' with a text input (annotated with a red arrow and 'Past ip address'), a dropdown menu (annotated with a red arrow and 'Select filtering policy'), and buttons for 'Add' and 'Edit as List'.

Please note, that the Android user interface varies depending on the device model.

2. Open the "Settings" app and navigate to the Wi-Fi menu.

## Settings

-  System apps updater >
-  Security status >
-  SIM cards & mobile networks >
-  **Wi-Fi** Flat >
-  Bluetooth Off >
-  Portable hotspot Off >
-  VPN >
-  More >

3. Press on arrow icon of your current Wi-Fi connection.

4. In the Network Details press on the "IP settings - DHCP".
