

# Android DNS Setup

1. Navigate to the SafeDNS **Dashboard > Settings** and copy your IP address in the "**Enter an IP address or DynDNS**" box. Click "**Add**".

The screenshot shows the SafeDNS Dashboard with the 'Settings' tab selected. The left sidebar contains a menu with 'Main', 'User administration', 'Settings', 'Devices', 'Policy', 'Schedule', and 'Advanced'. 'Settings' is marked with a red arrow and the number '1'. 'Devices' is marked with a red arrow and the number '2'. The main content area has tabs for 'Devices', 'Policy', 'Schedule', and 'Advanced'. Under the 'Devices' tab, there is a section for 'Your IP address' with a red box and a red arrow pointing to it labeled 'Copy ip address'. Below this, there are two columns for 'IPv4 DNS-servers addresses' and 'IPv6 DNS-servers addresses'. The IPv4 addresses are '195.46.39.39' and '195.46.39.40'. The IPv6 addresses are '2001:67c:2778::3939' and '2001:67c:2778::3940'. To the right, there is a 'DoH address' field with the value 'https://doh.safedns.com'. Below this, there is a section for 'IP addresses/DynDNS' with a header '0/13'. It contains a form to 'Add IP address or DynDNS' with a text input field labeled 'Enter an IP-address or DynDNS', a dropdown menu labeled 'Default', a 'Comment' field, and 'Add' and 'Edit as List' buttons. A red arrow points to the text input field labeled 'Past ip address', and another red arrow points to the dropdown menu labeled 'Select filtering policy'. Below the form, there is a table with columns 'IP address/DynDNS', 'Policy', and 'Comment'. The table is currently empty, with the text 'List is empty' under the first column.

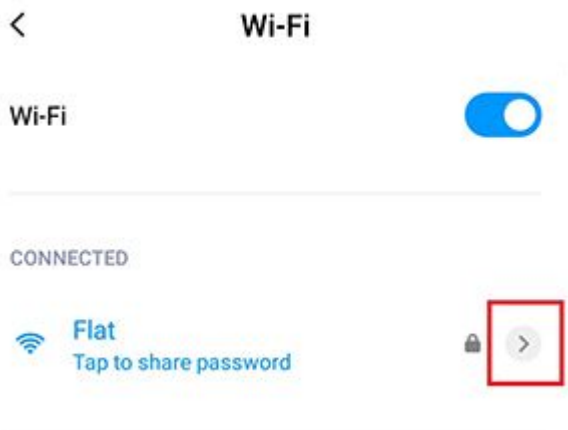

Please note, that the Android user interface varies depending on the device model.

2. Open the "Settings" app and navigate to the Wi-Fi menu.

## Settings

-  System apps updater >
-  Security status >
-  SIM cards & mobile networks >
-  **Wi-Fi** Flat >
-  Bluetooth Off >
-  Portable hotspot Off >
-  VPN >
-  More >

3. Press on arrow icon of your current Wi-Fi connection.

4. In the Network Details press on the "IP settings - DHCP".
