

# Mac DNS Setup

1. Navigate to the SafeDNS **Dashboard > Settings** and copy your IP address in the "**Enter an IP address or DynDNS**" box. Click "**Add**".

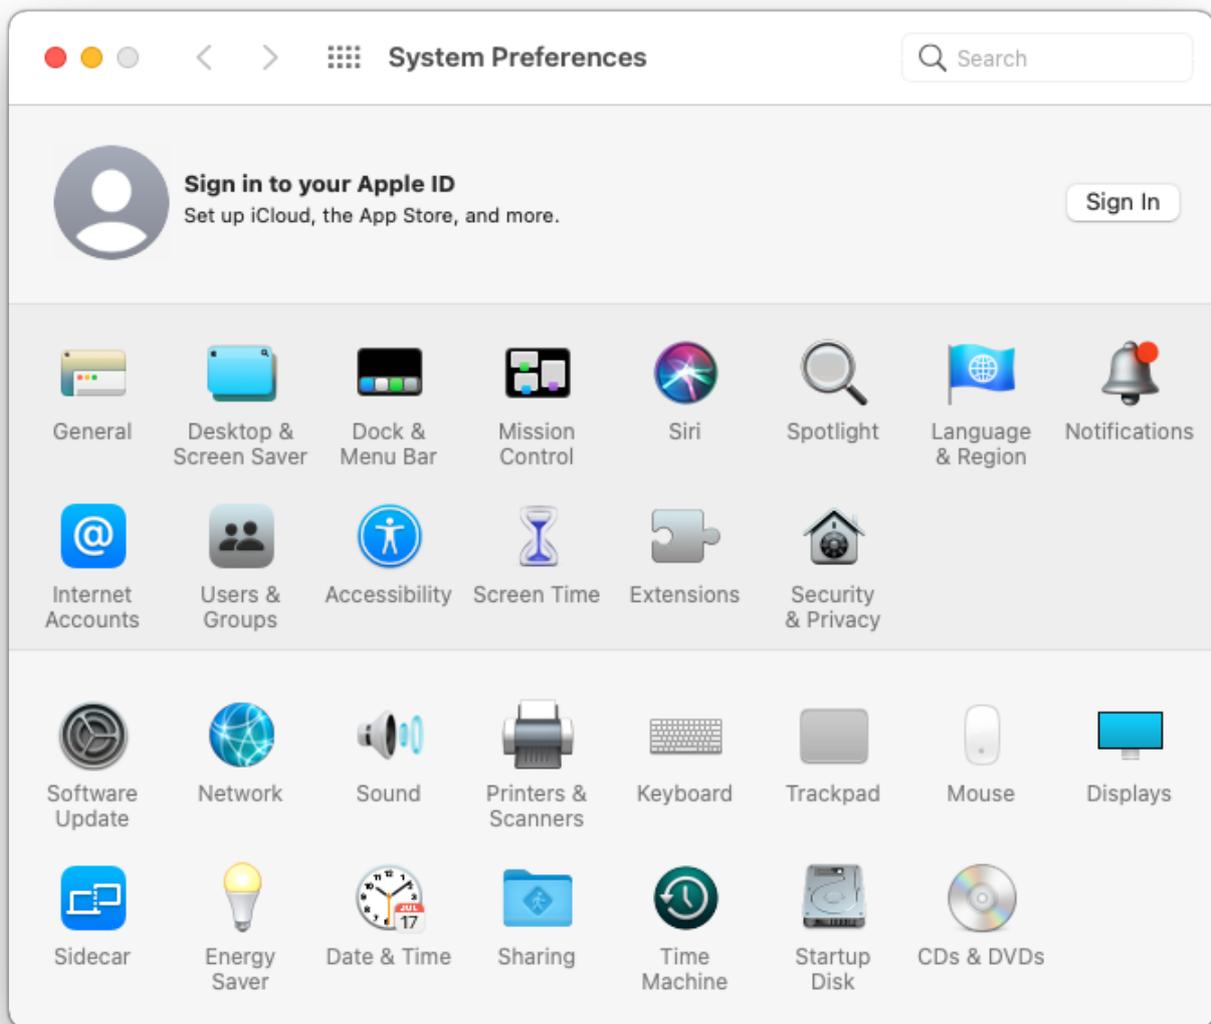

The screenshot shows the SafeDNS dashboard with the following elements:

- Left Sidebar:** 'Settings' (1) and 'Devices' (2) are highlighted.
- Top Tabs:** 'Devices', 'Policy', 'Schedule', 'Advanced'.
- Main Content:**
  - 'Your IP address' is redacted.
  - 'IPv4 DNS-servers addresses' are 195.46.39.39 and 195.46.39.40.
  - 'IPv6 DNS-servers addresses' are 2001:67c:2778::3939 and 2001:67c:2778::3940.
  - 'DoH address' is https://doh.safedns.com.
- IP addresses/DynDNS Section:** Shows a form to 'Add IP address or DynDNS' with a dropdown set to 'Default'. Red arrows point to the input field (labeled 'Past ip address') and the dropdown (labeled 'Select filtering policy').

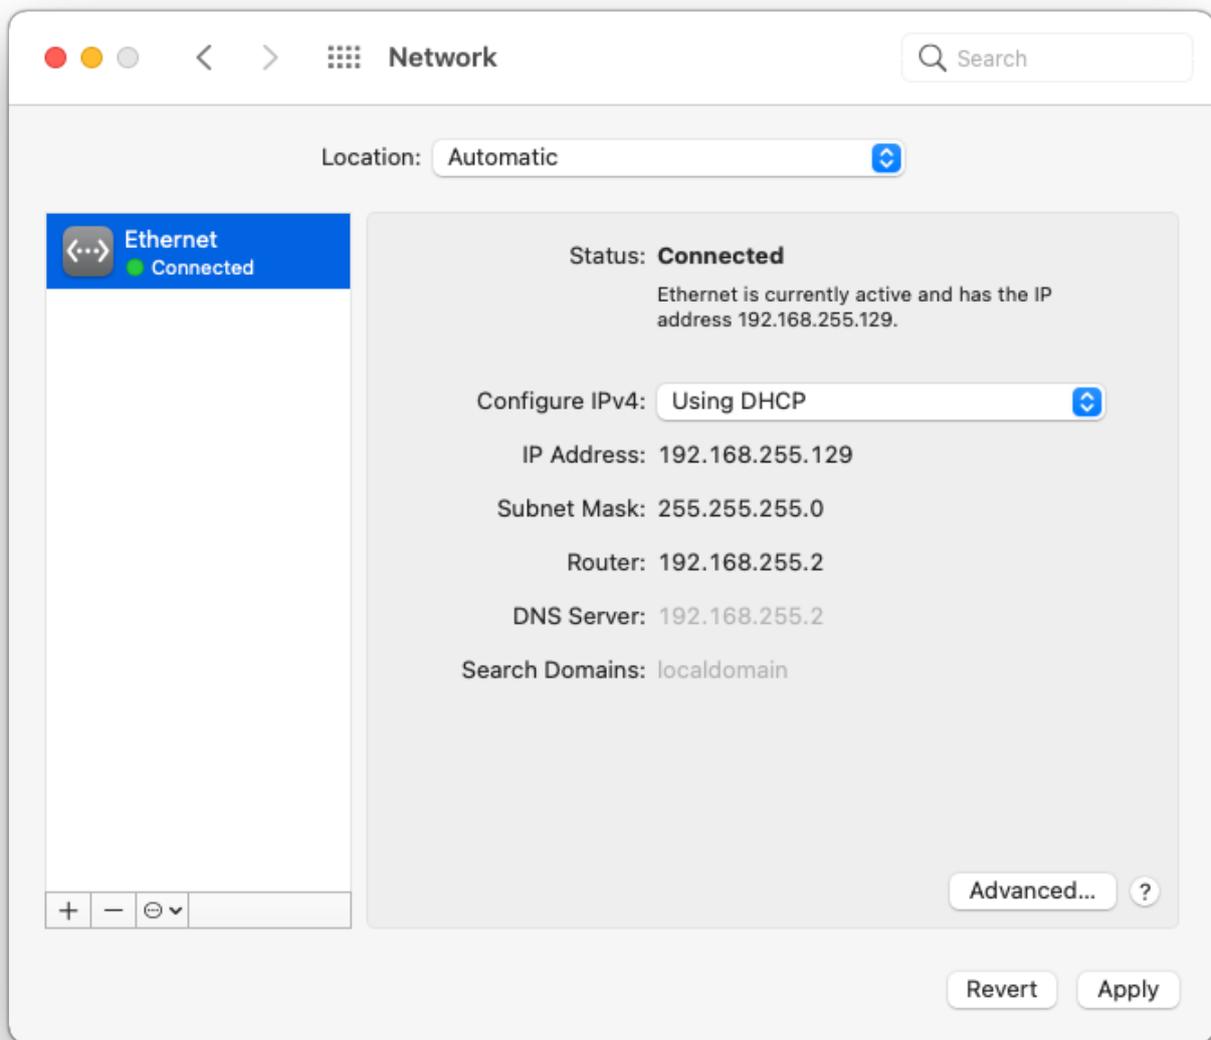

2. Navigate to the Mac OS "System Preferences".

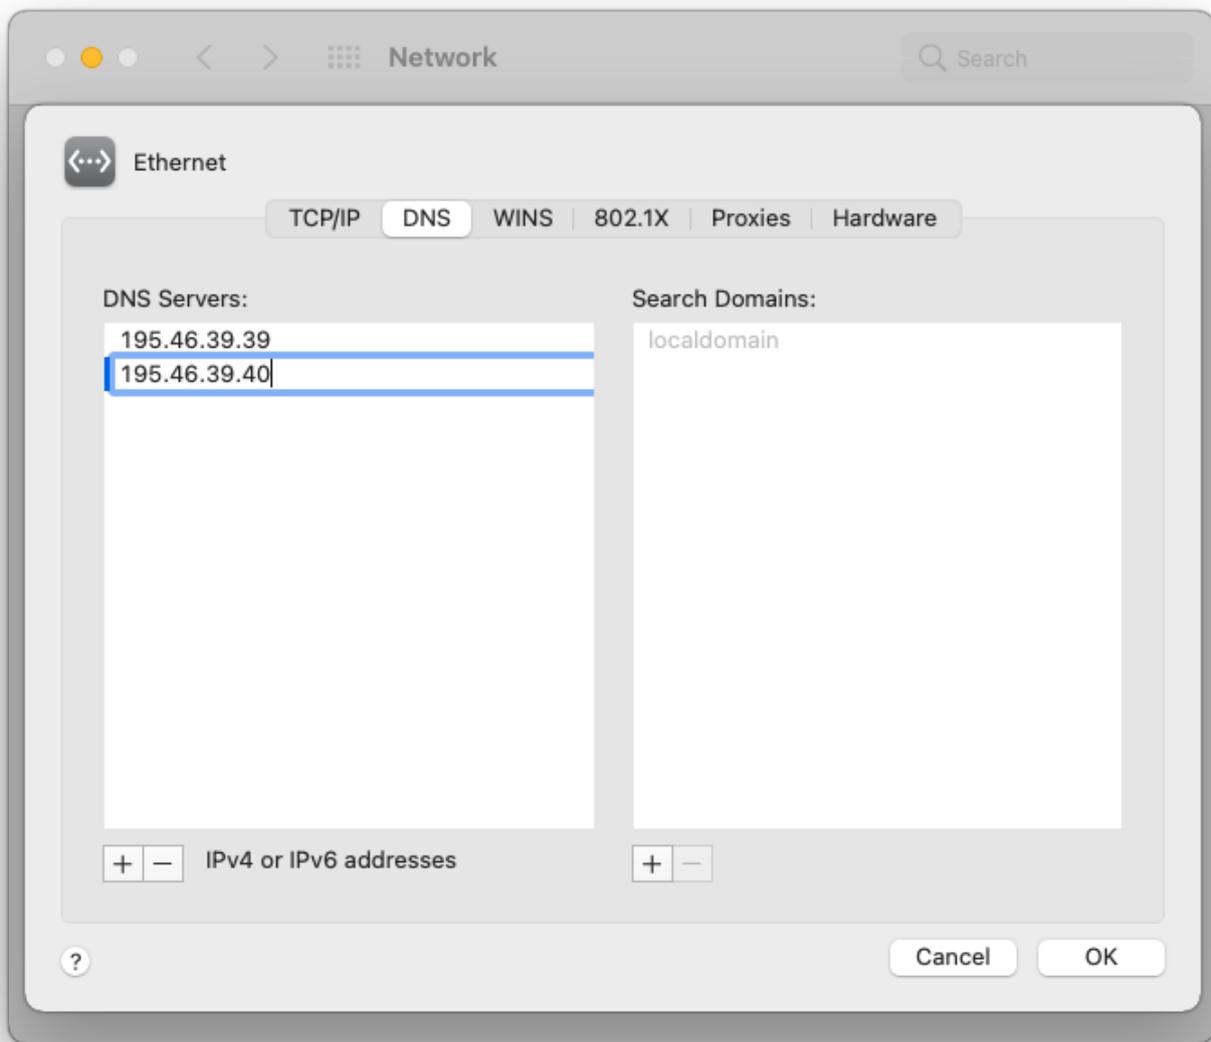

3. Click on the "Network" in the "Internet & Wireless" section of the opened window.

4. Choose an active connection from the list and click the "Advanced" button.

5. Select the "DNS" tab, add SafeDNS servers **195.46.39.39** and **195.46.39.40**, and click "OK".

**Your Mac is now filtered with the SafeDNS filtering policy.**

Please note that settings take 5-7 minutes to apply.  
Stats and filtering status update every 10 minutes.
