

# Verizon Router Setup

The first step is to locate the network configuration on your router and set the SafeDNS server- 195.46.39.39 and 195.46.39.40

To do that, click on the icon My Network and browse the Network Connection option:

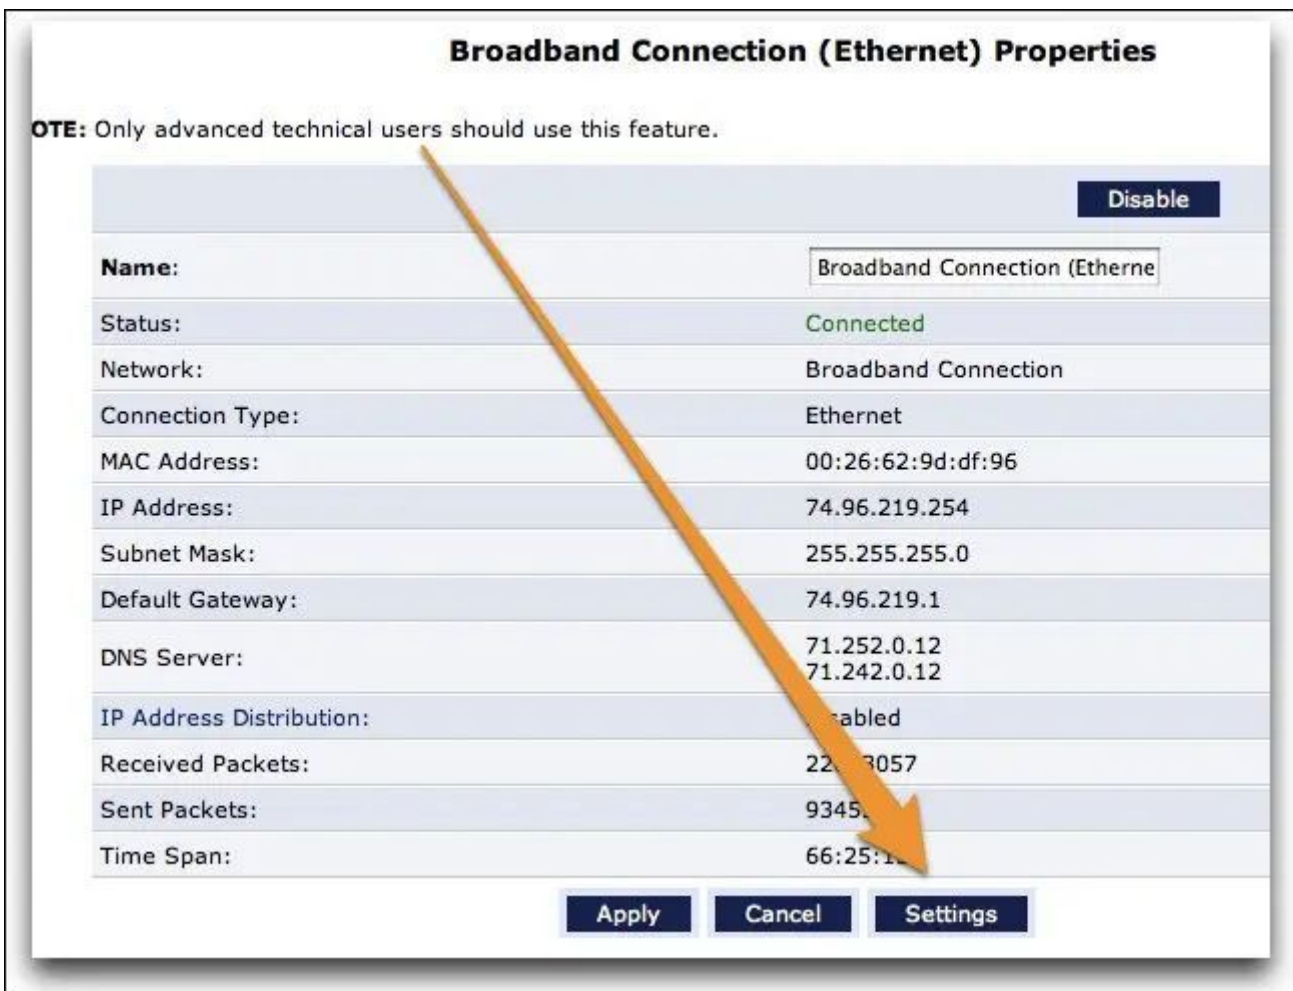

My Network > Network Connections

Locate in the connection list the Broadband Connection with the status: Connected:

On the next screen locate the Settings button and press it:

Change the DNS server option by selecting the “Use the Following DNS Server Addresses”

The screenshot shows a DHCP configuration window. The 'DNS Server' dropdown menu is open, showing three options: 'Obtain DNS Server Address Automatically' (checked), 'Use the Following DNS Server Addresses' (highlighted), and 'No DNS Server'. An orange arrow points from the 'DNS Server' label to the dropdown menu.

DHCP Lease:	<b>Renew</b> <b>Release</b>
Expires In:	93 minutes
DNS Server	▼ ✓ Obtain DNS Server Address Automatically Use the Following DNS Server Addresses No DNS Server
IP Address Distribution	
Routing Mode:	NAPT ▼

Once the option is changed, the fields are activated where you can set the SafeDNS DNS servers:

The screenshot shows the DHCP configuration window with the 'DNS Server' dropdown set to 'Use the Following DNS Server Addresses'. Two orange arrows point to the 'Primary DNS Server' and 'Secondary DNS Server' fields. The 'Primary DNS Server' field contains the IP address 195.46.39.39, and the 'Secondary DNS Server' field contains the IP address 195.46.39.40. The 'IP Address Distribution' dropdown is set to 'Disabled'.

DHCP Lease:	<b>Renew</b> <b>Release</b>
Expires In:	92 minutes
DNS Server	Use the Following DNS Server Addresses ▼
Primary DNS Server:	195 . 46 . 39 . 39
Secondary DNS Server:	195 . 46 . 39 . 40
IP Address Distribution	Disabled ▼

195.46.39.39 and 195.46.39.40.
