

# Windows 10 DNS Setup

## Video tutorial

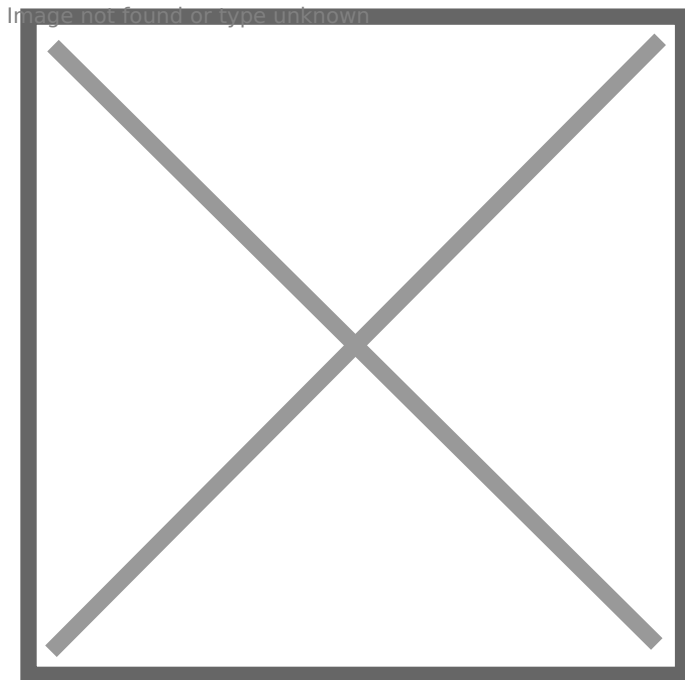

Watch this video tutorial to learn how to deploy SafeDNS on a Windows-based PC with static IP without the installation of any software

---

## Step-by-step guide

1. From the Taskbar pane, **right-click** on the Wi-Fi (or LAN) icon and select **Open Network and Sharing Center**:

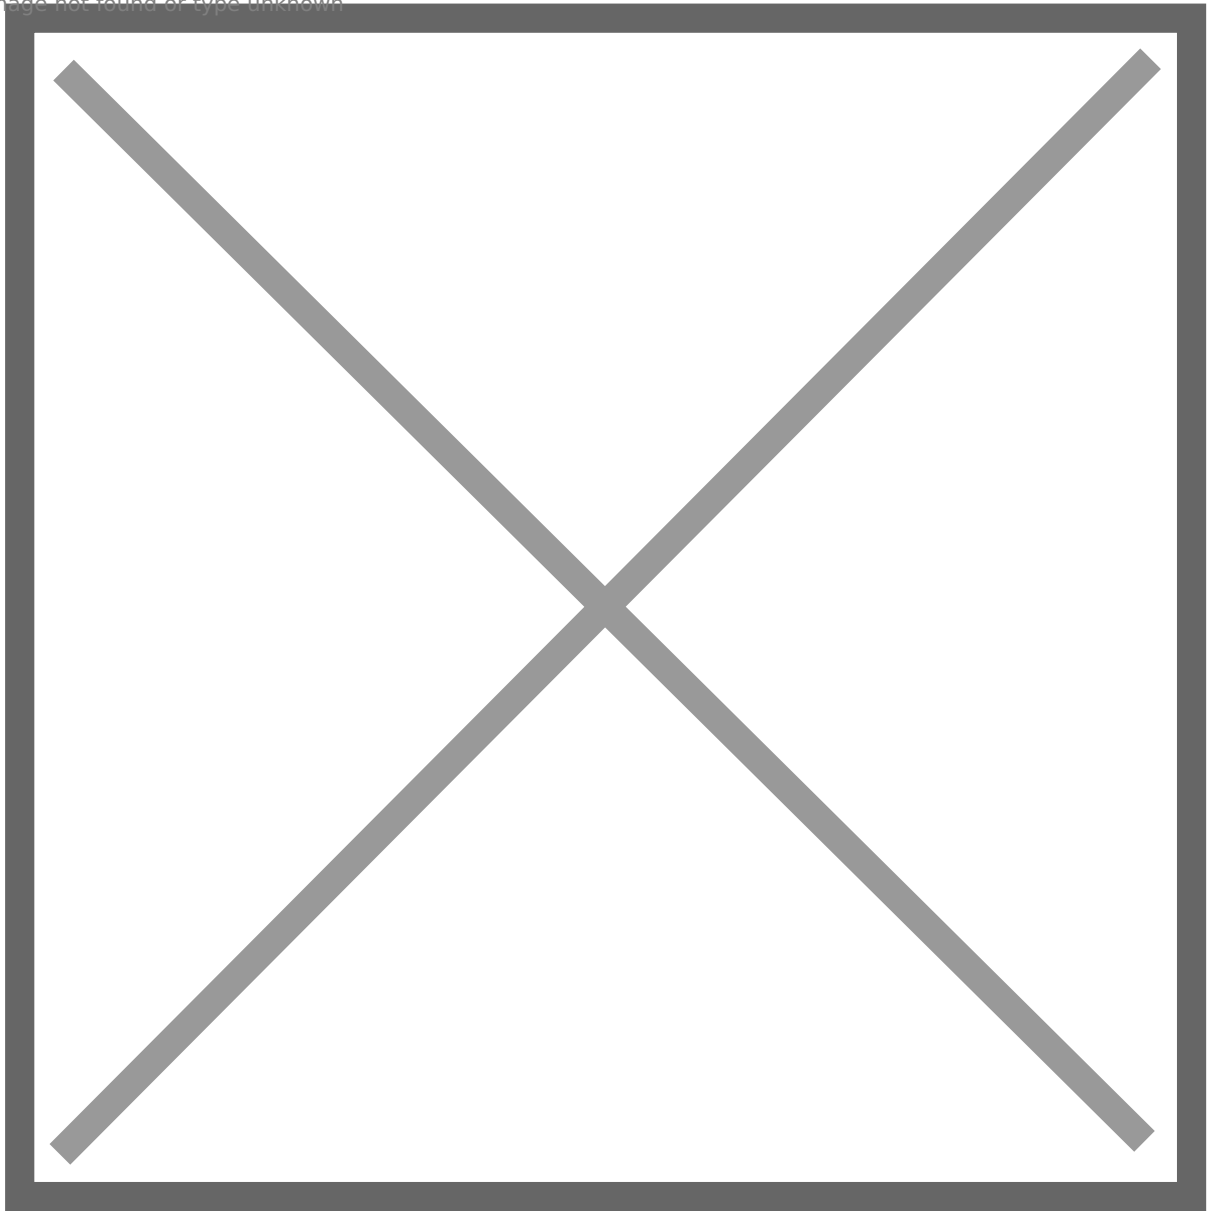

2. Select **Change adapter settings**.

3. **Right-click** on the current internet connection, and select **Properties**. If the system shows the security notification, click Yes.

Image not found or type unknown

4. We recommend disabling **Internet Protocol Version 6**. This will simplify the installation process and will have no effect on the quality of your internet connection. After that, select **Internet Protocol Version 4**, and click on **Properties**.

Image not found or type unknown

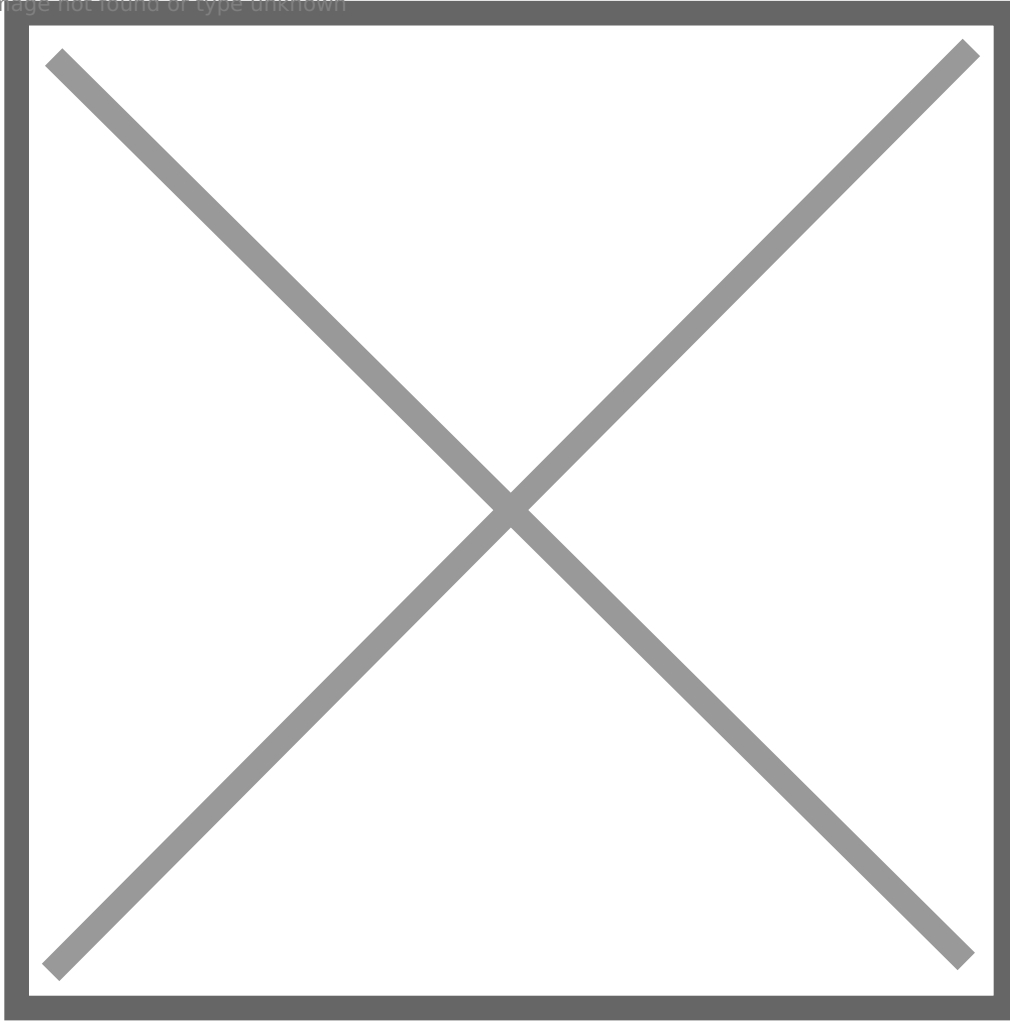

5. Select the option **Use the following DNS server addresses**, enter the following SafeDNS addresses:

**Preferred DNS server: 195.46.39.39**

**Alternate DNS server: 195.46.39.40**

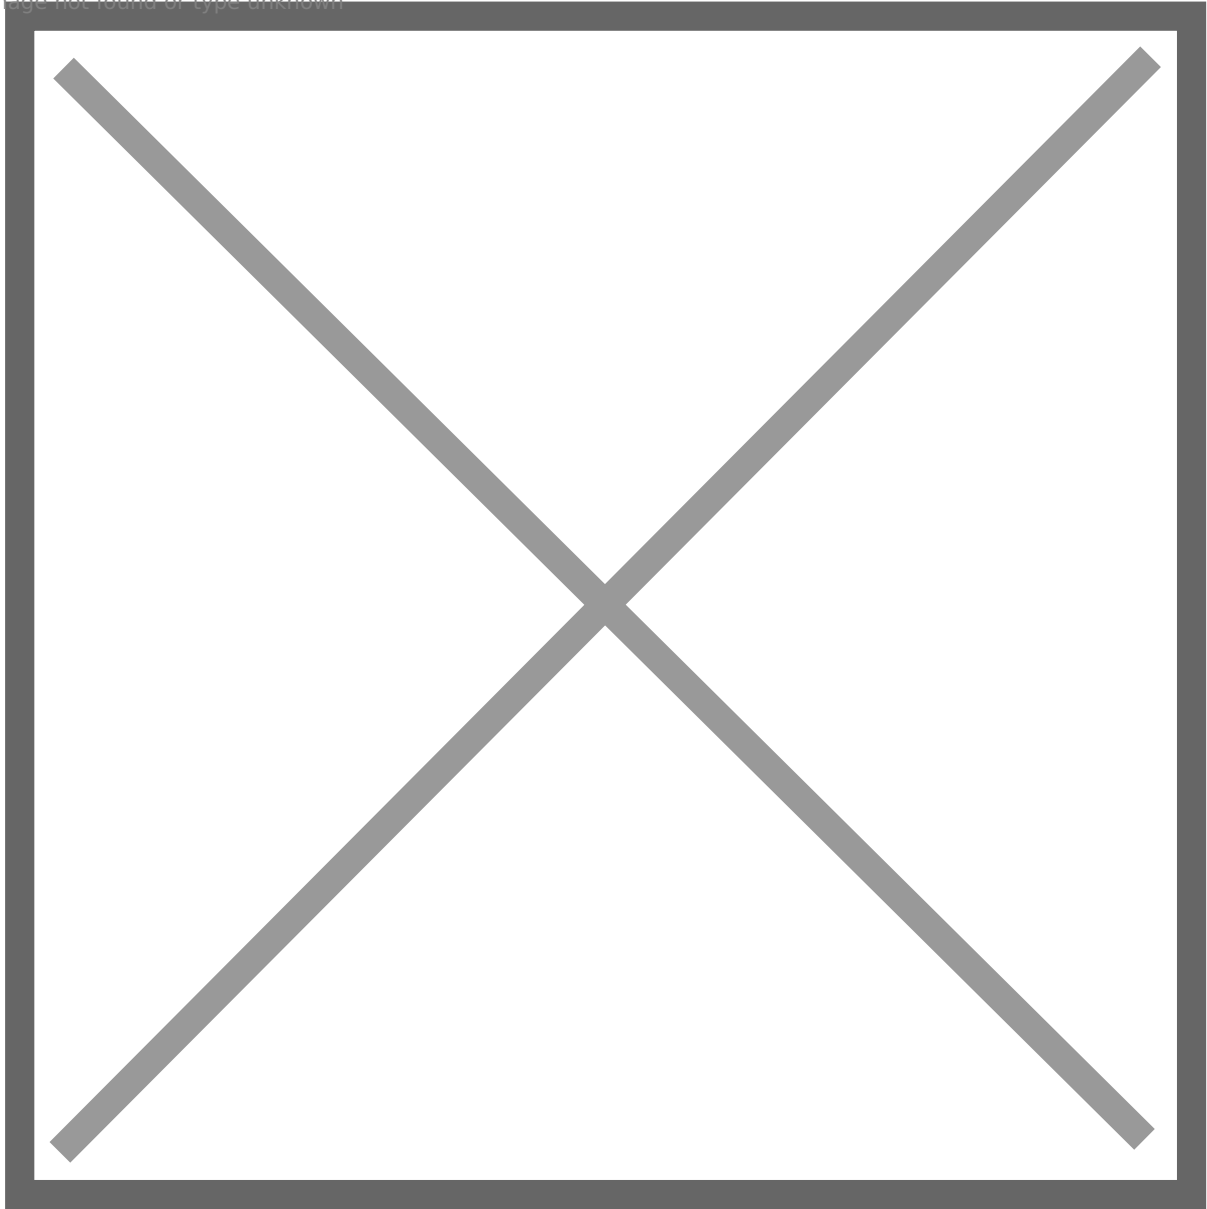

Image not found or type unknown

6. Click the **OK** button to save your settings, and **Close** the network properties window.

7. Navigate to the SafeDNS **Dashboard > Settings** and copy your IP address in the "**Enter an IP-address or DynDNS**" box. Click "**Add**".

You have successfully configured the SafeDNS for Windows 10.

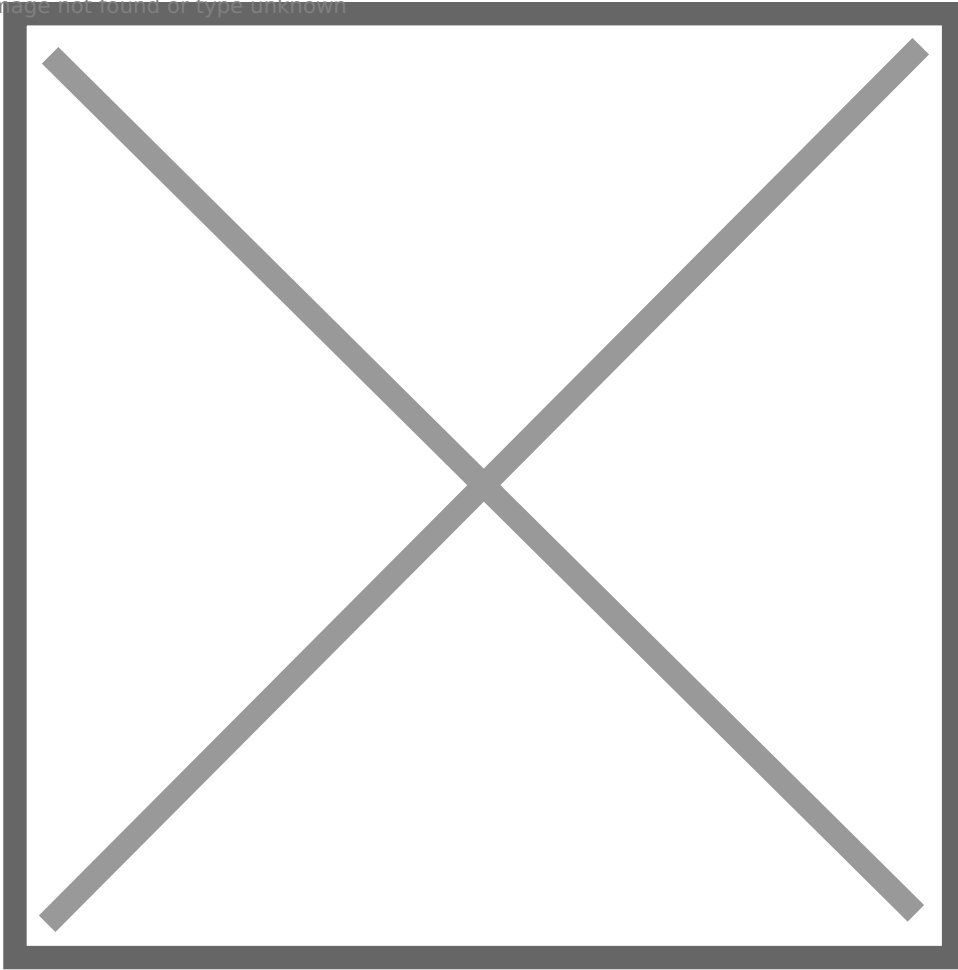

---

## Troubleshooting

**Please note** that Windows may still be using the addresses saved in the local DNS cache. It is recommended to clean it using the following steps:

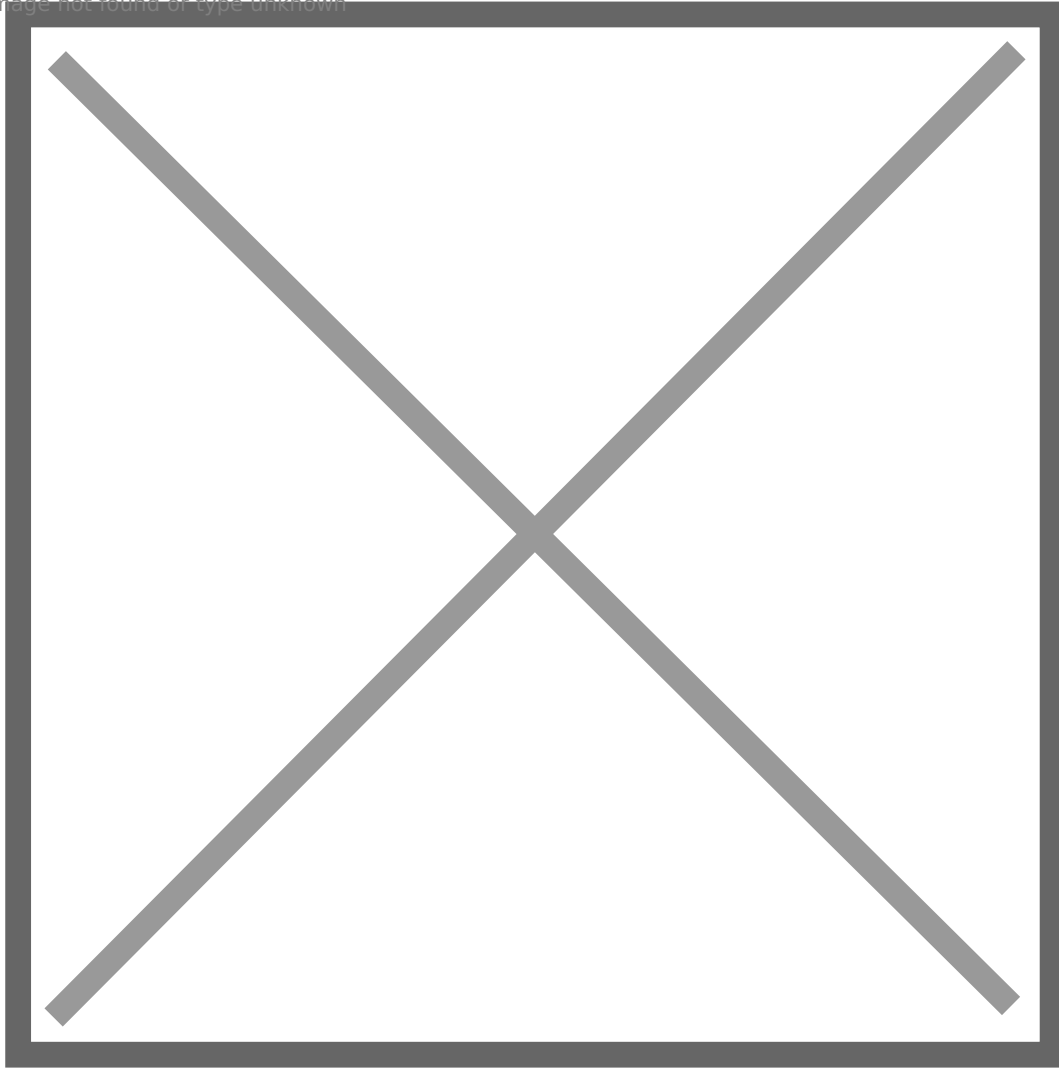

1. Press "**Start**"
2. Search for "**cmd**" and open the suggested application

3. Enter and run the following command in the opened window **ipconfig /flushdns**

Image not found or type unknown

[Learn more about how to clear DNS cache.](#)

Please note that settings take 5-7 minutes to apply.  
Stats and filtering status update every 10 minutes.
