

Windows 11 DNS Setup

Step-by-step guide

1. Navigate to the SafeDNS **Dashboard > Settings** and copy your IP address in the "**Enter an IP-address or DynDNS**" box. Click "**Add**".

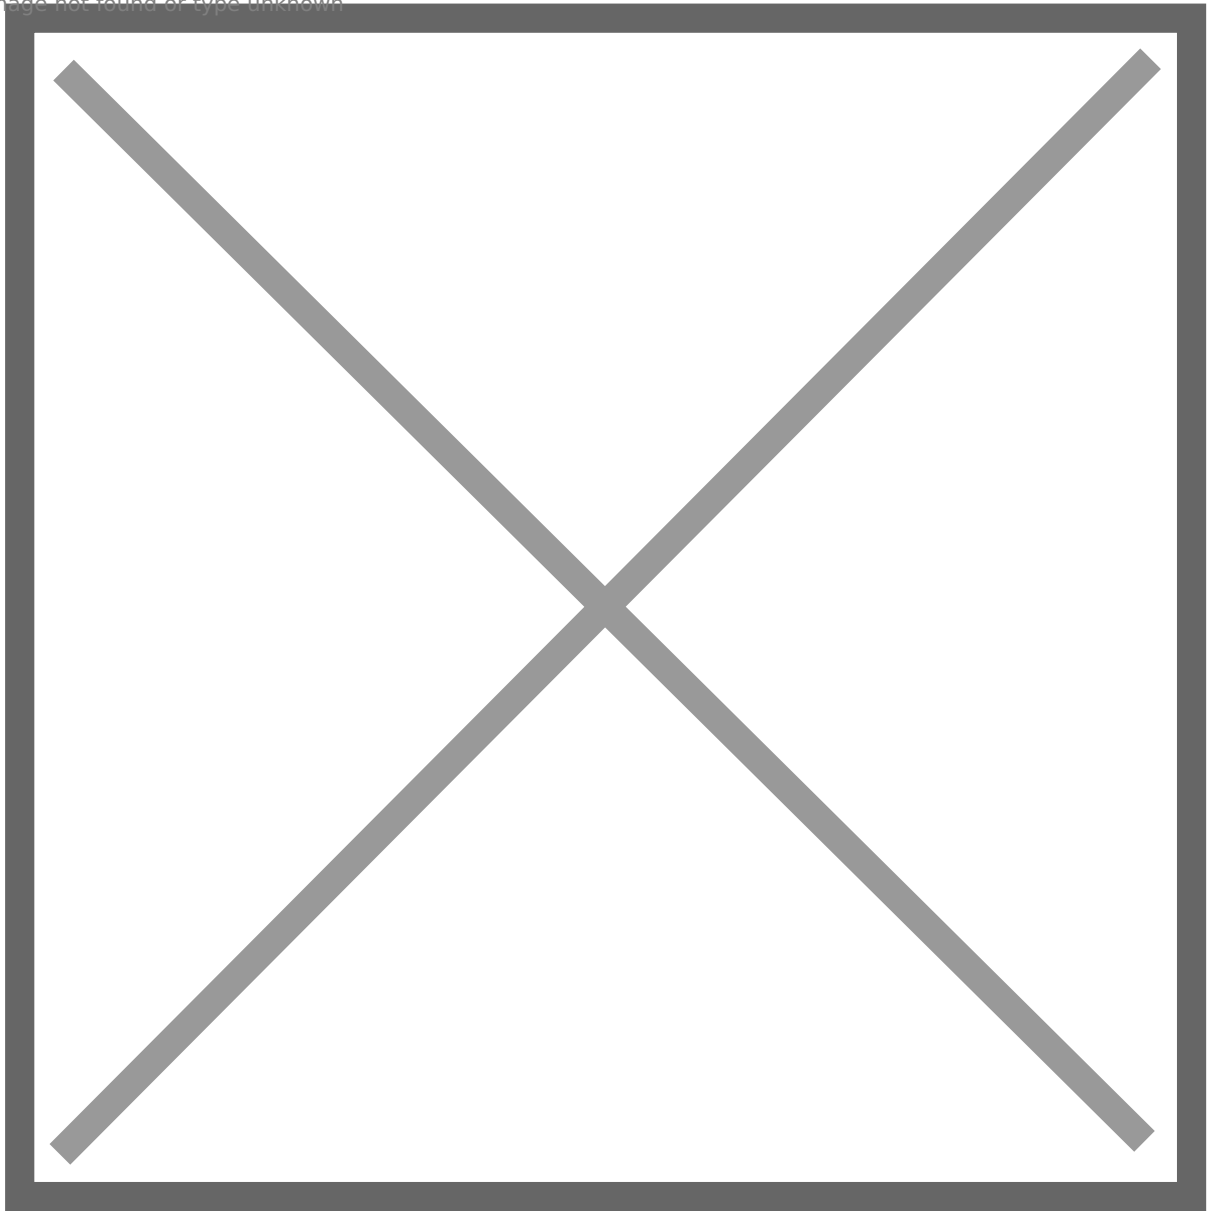

The screenshot shows the SafeDNS dashboard with the 'Devices' tab selected. The left sidebar contains a menu with 'Settings' (marked with a red arrow and '1') and 'Devices' (marked with a red arrow and '2'). The main content area displays the 'Devices' tab with a 'Video instruction for setting up' link. Below this, there are fields for 'Your IP address' (with a red arrow pointing to a redacted box and the text 'Copy ip address'), 'IPv4 DNS-servers addresses' (195.46.39.39, 195.46.39.40), 'IPv6 DNS-servers addresses' (2001:67c:2778::3939, 2001:67c:2778::3940), and 'DoH address' (https://doh.safedns.com). Below these fields is a section titled 'IP addresses/DynDNS 0/13' with a download icon. This section contains a form to 'Add IP address or DynDNS' with a text input field (labeled 'Enter an IP-address or DynDNS' with a red arrow and 'Past ip address'), a dropdown menu (labeled 'Default' with a red arrow and 'Select filtering policy'), a 'Comment' field, and 'Add' and 'Edit as List' buttons. Below the form is a search bar and a table with columns 'IP address/DynDNS', 'Policy', and 'Comment'. The table currently shows 'List is empty'.

2. From the Taskbar pane, **right-click** on the Wi-Fi (or LAN) icon and select **Open Network and Sharing Center**:

3. Select **Change adapter settings**.

4. **Right-click** on the current internet connection, and select **Properties**. If the system shows the security notification, click Yes.

Image not found or type unknown

5. We recommend disabling **Internet Protocol Version 6**. This will simplify the installation process and will have no effect on the quality of your internet connection. After that, select **Internet Protocol Version 4**, and click on **Properties**.

Image not found or type unknown

6. Select the option **Use the following DNS server addresses**, enter the following SafeDNS addresses:

Preferred DNS server: 195.46.39.39

Alternate DNS server: 195.46.39.40

Image not found or type unknown

7. Click the **OK** button to save your settings, and **Close** the network properties window.

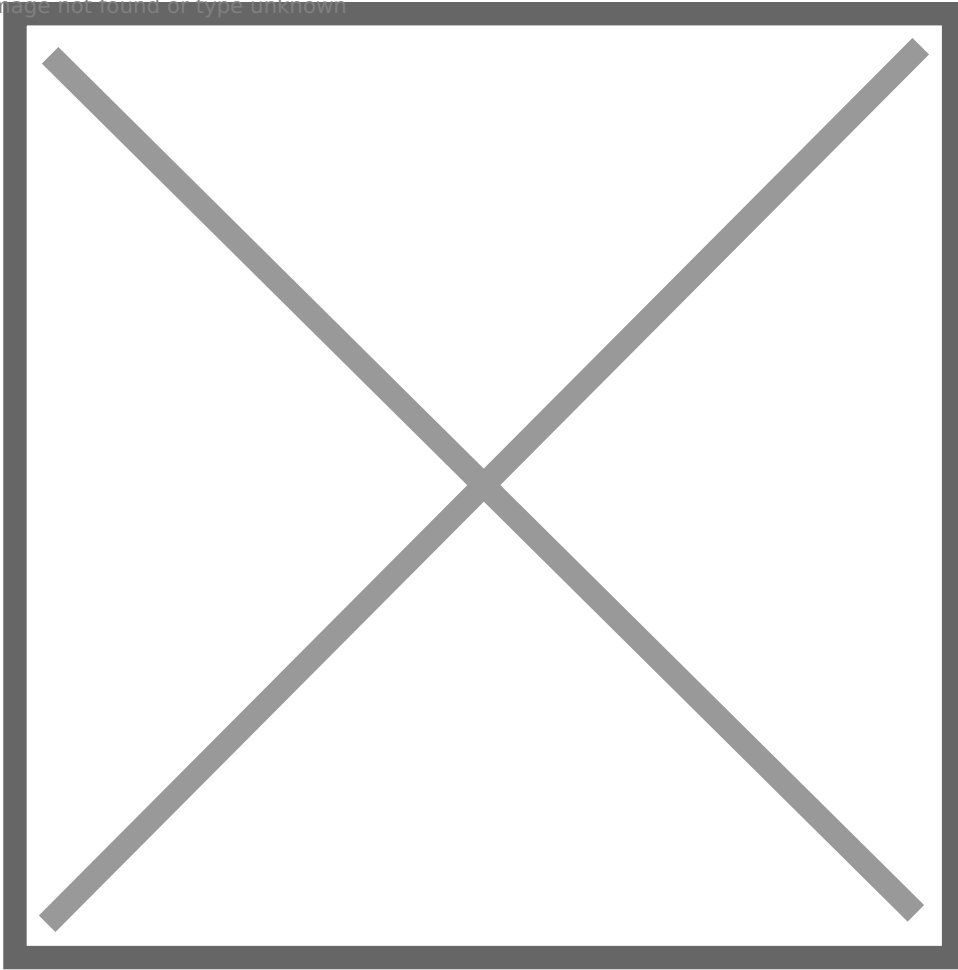

You have successfully configured the SafeDNS for Windows 10.

Troubleshooting

Please note that Windows may still be using the addresses saved in the local DNS cache. It is recommended to clean it using the following steps:

1. Press "**Start**"
2. Search for "**cmd**" and open the suggested application

Image not found or type unknown

3. Enter and run the following command in the opened window **ipconfig /flushdns**

Image not found or type unknown

[Learn more about how to clear DNS cache.](#)

Please note that settings take 5-7 minutes to apply.
Stats and filtering status update every 10 minutes.
