6. Backup and restore

Set periodic backup of directories:
`/etc/isp-go`
`/var/lib/isp-go/.ssh`

Set periodic backup of **Redis** database (you can get file name and path from the dbfilename and dir parameters of **/etc/redis/redis.conf** configuration file).

Restore process:

• Install **ISP-Go**. During the installation process, specify **127.0.0.1** as the IP from which access to the API is allowed in the `/etc/nginx/sites-available/isp-go-api` file. Do not make API requests until recovery is complete;
• Restore **Redis** database;
• Restore files to `/etc/isp-go` and `/var/lib/isp-go/.ssh` from backup directories;
• Restart `redis-server`, `isp-go-dnsproxy`, `isp-go-api` and `isp-go-blockpage`;
